Chart Last Updated
20 February 2013

Yellow boxes identify products, designs procedures, etc. still under development, or not yet implemented. Several of these opportunities are not active projects.

This chart provides an overview of devices, methods, and approaches that can be used to mitigate boat propeller injuries. It is a work in progress. We anticipate updating it from time to time.

You are welcome to print ONE copy of this 24 inch by 36 inch chart for your personal use or to have ONE copy printed at a copy shop at your own expense from this pdf file. You may find it helpful to tape the chart to a piece of cardboard for viewing.

Visit the Propeller Guard Information Center for more information about issues surrounding boat propeller accidents, and leave your comments on this chart.
