

Yamaha Internet Activity per Hour on Propeller Safety.com

1 January 2013

This chart illustrates when Yamaha found our three articles about their new propeller guard and our posting of Yamaha's own statements of praise about this new prop guard. It suggests the various Yamaha divisions communicated with each other after finding the statements. This chart was constructed from summaries of data in our web site logs.

Internet activity = visiting a page or clicking on a link on one of our pages to an external site, such as our links to Yamaha's pages on the guard. 1 unit per page visited or external link clicked on.

All dates and times refer to CDST (Central Daylight Savings Time).

Stainless Steel Prop. Guard

A commercial grade stainless steel propeller guard is fitted as part of the flood rescue package. When operating in flooded environments the likelihood of swimmers/diver/casualties being in the water means that a prop. guard is essential. Yamaha propeller guards, tailored to fit individual engines, are also specifically designed to have minimal impact on performance.
